# SEATTLE GALVANIZING COMPANY

*The Northwest's Largest Galvanizer*

## VALUE ADDED SERVICES

- ✓ EXPEDITED SERVICE
- ✓ SANDBLASTING
- ✓ TRUCKING
- ✓ MASKING
- ✓ THREAD CHASING
- ✓ DRAIN/VENT HOLE PLUGGING
- ✓ ASTM CERTIFICATION

For over half a century, Seattle Galvanizing has been providing corrosion protection for steel through Hot-Dip Galvanizing. Every year, we have the capacity to process over **50,000 tons**. We not only have the largest galvanizing kettle in the Pacific Northwest, but we also have the latest material handling equipment, lifting capabilities, stabilized storage space, and transportation services to make us your **premier full-service galvanizing option**.

## YOU FABRICATE IT, WE GALVANIZE IT!

# Ten Reasons to Use Structural Steel

## 1. Cost-effective

Compared to other framing materials, structural steel brings greater value to a project in terms of initial cost and can reduce costs in other areas, such as foundations, general conditions and facade systems.

## 2. Accelerated schedules

The structural framing system is always on the project's critical path regardless of material. Structural steel is fabricated off-site while preliminary site preparation and foundation work are being performed. Then it is brought to the site and rapidly erected, accelerating the overall project schedule.

## 3. Increased usable floor space

Structural steel is both light and strong, allowing for long spans and open, column-free spaces.

## 4. Aesthetically pleasing

Structural steel frames provide designers with a wide range of options for addressing a project's aesthetic requirements. Structural steel can be rolled, curved, and integrated into irregular building shapes. At the same time, its small footprint contributes to a sense of transparency for the building.

## 5. Future adaptability

An existing steel frame can be easily modified to address changing building requirements and uses.

## 6. Quality and predictability

Structural steel is fabricated off-site under controlled conditions, ensuring a high-quality product and reducing the number of costly fixes at the job site - allowing for just-in-time delivery and , acceleration of the overall project schedule.

## 7. Ease of design

Structural steel is produced to precise tolerances and consistent strength levels, which, when combined with an established, well-documented design approach, can greatly simplify the design process.

## 8. Enhanced productivity

Advanced technologies have been proven to reduce or eliminate errors, improve safety, and lower project costs. Structural steel leads the construction industry with a fully integrated supply chain that uses computer-aided manufacturing and building information modeling (BIM) at all stages of design and construction.

## 9. Green

Today's modern steel mills produce steel containing an average of 90% recycled material. At the end of a building's life cycle, 100% of

the steel frame can be recycled (the current recovery rate for structural steel is 98%). With low environmental impacts on a per-square-foot-of-construction basis, steel is the premier choice for environmentally conscious, sustainable projects.

## 10. There's always a solution in steel

No matter what specific project challenges arise, structural steel framing systems can meet them!

It is critical that during periods of volatility, structural engineers, architects, construction managers, general contractors, and project owners step back and make wise decisions regarding material and product choices based on a full range of considerations.

## Fabricators by Company

### Thompson Metal Fab, Inc.

3000 SE Hidden Way,  
Vancouver, WA 98661

**Phone:** 360.696.0811

**Email:** mmoore@tmfab.com

**Website:** www.tmfab.com

**Year Established:** 1937

**Description:** Our technically advanced facility features 8 huge bays, over 300,000 square feet of indoor fabrication space, a 12-acre yard for assembly and fit-up, hydro cranes, 40-ton moving dollies, our own onsite coatings department, and access to the Pacific Ocean via Columbia River Barge Slip. Thompson serves the following markets: Marine/Hydro, Bridge, Oil & Gas, Tanks/Vessels, and Modular/Structural. We are known for being a leader with complex structures.

**Contact:** Michael Moore

### Transco Industries, Inc.

PO Box 20429,  
Portland, OR 97294

**Phone:** 503.256.1955

**Email:** ap@transco-ind.com

**Website:** www.transco-ind.com

**Year Established:** 1961

**Description:** Transco Industries has supplied fabricated steel, stainless steel & aluminum to an extremely diverse customer base over our 50+ years of business. In addition to fabricated metals, we have also manufactured many pieces of custom equipment/machinery, both customer & self designed. This experience, paired with our AISC certified facilities which include over 100,000 SQ-FT of manufacturing space, located on 10 Acres housing several pieces of automated processing equipment, as well as our own coating facilities makes Transco a great choice when looking to single source your project. Transco is also has an AWS D1-6 structural welding - stainless steel qualification.

**Contact:** Jeff Brown

# PNSFA Membership Benefits

---

Join PNSFA and connect with Fabricators and Steel Industry Partners throughout Oregon and Washington.

- Network with your peers and partners at the Annual Golf Tournament and Fall Conference.
- Corporate listings in the Resource Guide and Website link you with the partners and fabricators you need.
- Engage your team and bring valuable content and education opportunities into your business from the Fall Conference and the Spring Member Meeting's Economic Forecast.
- Consider serving on a committee or the PNSFA board and gain valuable leadership skills.
- Get involved with community projects and student activities promoting the steel business.

## **Fabricator/Regular Membership**

A fabricator/regular member of the Association is a company that is primarily active in fabricating and/or processing steel through either sawing, shearing, forming, flame cutting, burning, or welding steel products within the states of Alaska, Idaho, Montana, Oregon, Washington, California or the Canadian Provinces of Alberta and British Columbia. The primary occupation of the business shall be the fabrication and/or processing of structural and/or miscellaneous steel products as defined by the latest Code of Standard Practices as published by the American Institute of Steel Construction, and plates of flat hot rolled finished products whose minimum thickness is 0.180, or any combination of the structural steel as defined above.

## **Associate Membership**

Companies that are associated with the steel industry who produce primary steel products, supply primary materials, or supply services to the steel fabricating industry.

## **For More Information about PNSFA and Membership**

# FEWER PROBLEMS.

# MORE TMF SOLUTIONS.

Before you select a fabricator to create the complex, multifaceted, "never-been-done" projects, you might ask yourself:

- Am I confident in the people I will be working with?
- Does the facility fit the need for my project?
- Is my schedule realistic given the capacity of the fabricator?
- Does the fabricator have a body of experience equal to my request?

If your answer is *no* to any of the above, consider TMF. We'll mitigate your fabrication risks by providing transparency and value-based solutions.

# AISC Certification

## How can it benefit my construction project?

AISC's certification programs set the quality standard for the structural steel industry and are the most recognized national quality certification program for the industry. AISC's programs focus on the entire process of fabrication and erection and the goal is to build quality structures from the start by focusing on error prevention rather than error correction.

Certified companies have been through a rigorous initial evaluation and are subject to annual audits. These evaluations require a comprehensive administrative review, a documentation audit, and an on-site audit of the firm's quality management system. This is significantly different than "product inspection," since inspection does not focus on the root cause of the error and preventing it from happening again. An initial certification may take up to six months to complete but the annual cost is relatively moderate at less than \$5,000 for an AISC member fabricator with fewer than 99 employees.

During the on-site audit, a company's day-to-day operations are compared with the documented procedures from its quality management system. These systems are measured against AISC's list of core quality criteria for both fabricators and erectors. Ultimately, the program requires the company to be accountable for all facets of its organization, from management responsibility to employee training to material purchasing and handling to project specific erection plans.

A key feature of the program is creating a continuous growth model that requires goal setting. Even the best and brightest firm – regardless of size – can benefit from having its quality procedures reviewed and audited on a regular basis.

So, how does **AISC Quality Management Systems Certification** add value to projects and reduce risk?

### Quality Assurance

Have you run into issues on projects that didn't require AISC Certification—or on projects that specified AISC Certification but the requirements were waived? Nobody likes to find mistakes, especially ones that cost the project time or money. AISC's program is designed to certify that companies have proper procedures in place and are following them. Through the auditing process, the program verifies a company's QMS is meeting the certification requirements.

### Evaluate and Prequalify Project Bidders

Sometimes you just don't have a relationship with fabricators or erectors near your project. Or, maybe the project team needs

a short list of bidders. Selecting AISC-Certified companies can identify a steel team that has an active, dedicated quality management system in place and adhered to. The easiest way to find an AISC-Certified fabricator or erector is to visit [www.aisc.org/certsearch](http://www.aisc.org/certsearch).

### AISC Program Standards Have Universal Recognition

Section 1704 of the International Building Code (IBC) and Chapter N of the AISC Specification for Structural Steel Buildings allow for the waiving of special inspection requirement for structural steel fabricators and erectors approved by the authority having jurisdiction (AHJ). Most AHJs approve AISC-certified fabricators and erectors, saving the project money and time because those inspections are performed by the fabricator or erector with their own in-house staff.

For additional information, please visit [www.aisc.org/certification](http://www.aisc.org/certification) or contact AISC at 312.670.7520 or [certification@aisc.org](mailto:certification@aisc.org). Source: American Institute of Steel Construction

# About PNSFA

---

The steel industry in the Pacific Northwest is recognized as an established community of immense capacity and capability. Its scope encompasses the largest projects as well as the most technically exacting, tapping into a deep heritage of metal working experience and knowledge.

This Resource Guide is produced by the Pacific Northwest Steel Fabricators' Association (PNSFA) as a guide to steel fabricating and processing resources available in the Northwest Region. It is our hope that you will discover this to be an indispensable tool, providing knowledgeable and helpful contacts in all aspects of steel fabrication.

PNSFA encourages the development of the steel industry in the Pacific Northwest, strengthening its infrastructure through the exchange of knowledge and information among its members while also providing exposure to and training from specialists in related fields. Striving to keep steel professionals current and proficient as well as progressive in their approach to their industry is PNSFA's goal.

The PNSFA membership enjoys the company and benefit of producers of steel plate, structural members, pipe and tubing. We include steel distributors, processors, fabricators, providers of machining services, coatings, fasteners, equipment and others.

To learn more about PNSFA or for fabricator and associate membership information, please contact us.

# Standard Steel Fabricating Co

**Call Us Today**  
**206-767-3314**

## Steel Fabricating Contractors in Washington, Alaska, & Hawaii

## Experience You Can Count On!

When you trust in Standard Steel Fabricating you get a company that offers the best product at a reasonable price. With over 80 years in business, we have the experience and expertise to take on jobs of all sizes. Our clients choose us because we offer unmatched expertise and service.

### **Our services and expertise cover a wide range of applications including:**

- Structural Steel Components
- Architectural Steel Elements
- Stairway Systems And Railings
- Utility Substation Structures
- Box Girders
- Marine Structures such as Dolphins & Gangways
- And Much More

### **We've earned our client's trust by:**

- Maintaining Quality Control On All Products
- Offering On Time Delivery
- Meeting Safety Requirements, Codes, & Practices
- Offering Fast And Efficient Production

With an experienced team on our side, we are able to produce up to 300-tons of structural fabricated products per month. Our products can range up to a maximum length of 120-ft. and have an overall lifting capacity at 20-tons. With such diversity, we have the ability to take on all types of projects of different sizes ranging from construction clientele to industrial, institutional, commercial and marine and more.

We have membership in the following professional associations

**8155 First Avenue South • Seattle, WA 98108**
